About this release

Debian GNU/Linux 7 comes with more than 30,000 ready-to-use software packages. It includes over 10,000 new packages.

Debian GNU/Linux 7 features a Linux 3.2 kernel as its default in the installer and on all Linux architectures. For Desktop environments, it comes with Gnome 3.2, KDE 4.8 and XFCE 4.8, all backed up with X.org 7.6. It includes stable and current versions of common server software such as Apache 2.2.22, PHP 5.3.10, MySQL 5.1.58, PostgreSQL 9.1 and Samba 3.6.3.

Debian GNU/Linux 7 introduces multiarch support, to make programs and libraries of different hardware architectures easily installable in parallel on the very same system. This is a major enhancement to Debian's ability to deliver on the promise of being a universal operating system.

About Debian

Debian GNU/Linux is a free operating system, developed by thousands of volunteers from all over the world. The Debian project's key strengths are its volunteer base, its dedication to the Debian Social Contract and Free Software, and its commitment to provide the best operating system possible. Debian 7 is another important step in that direction.
